Report Overview:

Biodegradable grass seed mat, also known as grass seed germination blankets and erosion control mats, work well at preventing grass growing in clumps to give a uniform lawn. They can also help with soil erosion and are an alternative to scattering grass seeds directly onto the earth. The blanket holds the seeds safely in place, so they won't get washed away by rain, eaten by the birds, or dug up by the dog. It will also prevent the soil from being disturbed or washed away, hence the alternative name of "soil erosion mat/blanket". As well as preventing the rain from disturbing the seeds, the blanket also locks in the right amount of moisture for the germinating grass. Another (big) advantage is that it makes it tricky for weeds to grow up around the new grass. Weeds love the tilled soil and regular watering that grass seeds need, and a germination blanket helps prevent them from taking advantage of these conditions.

The Global Biodegradable Grass Seed Mat Market Size was estimated at USD 163.34 million in 2023 and is projected to reach USD 267.96 million by 2029, exhibiting a CAGR of 8.60% during the forecast period.
