## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Biodegradable Medical Microspheres competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Biodegradable medical microspheres are tiny spherical carriers made from polymers that can naturally degrade within the body. They are widely used in controlled drug release, targeted drug delivery, vaccine administration, and tissue regeneration. Common materials include polylactic acid (PLA), polyglycolic acid (PGA), and poly(lactic-co-glycolic acid) (PLGA). After administration, these microspheres degrade into non-toxic byproducts that are either absorbed or excreted by the body, eliminating the need for surgical removal and enhancing the safety and convenience of medical treatments.

The global Biodegradable Medical Microspheres market size was estimated at USD 951.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
