Abstracts

Biodegradable Packaging materials designed to break down naturally by microorganisms into water, carbon dioxide, and biomass over time. These materials are typically derived from renewable sources like starch, cellulose, or proteins. All compostable products are biodegradable, but biodegradable products are not always compostable. Compostable packaging has defined characteristics, tested and evaluated according to standardized parameters (UNI EN 13432). Compostable packaging is prepared for industrial composting plants and must be mixed with organic waste in order to, as the term implies, turn it into compost.

The global Biodegradable and Compostable Packaging Material market size was estimated at USD 1012.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
