Abstracts

Biodegradable Packaging Papers Barrier Coatings are eco-friendly coatings that can be broken down into harmless substances in the natural environment through microbial action, designed to enhance the barrier properties of packaging paper. These coatings are typically made from natural polymers (such as starch, cellulose, chitosan) or biodegradable synthetic materials (such as polylactic acid PLA, polybutylene adipate PBAT). Their primary function is to block oxygen, water vapor, grease, and other external substances, thereby protecting the packaged contents from contamination and spoilage. Compared to traditional non-biodegradable coatings, biodegradable coatings can naturally decompose after disposal, reducing environmental pollution, and are particularly suitable for single-use packaging and food packaging. With global attention on plastic pollution and the push for environmental regulations, biodegradable packaging paper barrier coatings are becoming an important innovation in the packaging industry.

The global Biodegradable Packaging Papers Barrier Coatings market size was estimated at USD 2667.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
