Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Biodegradable Plastic Bags competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of biodegradable plastic bags reached 358,000 tons, with an average selling price of \$6,422 per ton. Biodegradable plastic bags are created using materials that will allow the bags to completely decompose after a period of time. Most biodegradable plastic bags are said to decompose in three years, although many completely disintegrate in less time. The bags leave no discernible trace and are completely harmless to the environment. Biodegradable plastic bags require two key elements in order to decompose. The bags need to be exposed to oxygen and light. Therefore, biodegradable plastic bags do not start to decompose from the date of manufacture, only after they have been exposed to light and air. Upstream raw materials fall into two categories: bio-based materials, such as polylactic acid (PLA) and polyhydroxyalkanoates (PHA), primarily derived from biomass such as corn and straw; and petrochemical-based materials, such as PBAT, PBS, and PCL, primarily synthesized through petrochemical processes. The cost structure of biodegradable plastic bags primarily consists of raw material costs, processing fees (including labor, equipment depreciation, and energy consumption), and post-process costs such as printing and bag making. Raw materials account for the largest portion, typically reaching 60%~70%. For example, the price of mainstream PBAT/PLA blended bags is approximately 12,000~16,000 yuan per ton. This translates to a material cost of approximately 0.08~0.13 yuan per typical shopping bag (approximately 6~8 grams). After factoring in manufacturing, printing, waste, and administrative costs, the ex-factory price is generally 0.15~0.25 yuan per bag, roughly two to three times that of traditional PE bags.

The global Biodegradable Plastic Bags market size was estimated at USD 2300.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
