Abstracts

Biodegradable smart sutures are biocompatible and degradable suture materials that can naturally degrade in the body and eventually be absorbed without surgical removal. Their "smart" properties are usually manifested in their ability to respond to changes in the external environment (such as temperature, pH, pressure, etc.), or in combination with the sustained release function of drugs/biological factors, to promote wound healing and reduce complications. This type of suture is widely used in surgical operations, wound repair and other fields, especially in soft tissue repair and organ reconstruction, reducing surgical pain and recovery time for patients.

The global Biodegradable Smart Suture market size was estimated at USD 631.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
