Abstracts

The biodegradable stents are used for treating cardiovascular conditions pertaining to the coronary artery. These stents are also known as bioabsorbable or bioresorbable vascular scaffolds and are surgically placed in the coronary artery for eluting the drug that is administered for vascular restoration and the polymer coating. The biggest advantage of these stents is that they get entirely absorbed in the vessels over a period of time, reducing the risk of complications or infections.

The global Biodegradable Stents market size was estimated at USD 1050.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.60% during the forecast period.
