Abstracts

Biodegradable surfactants are environmentally friendly surface-active agents that can be broken down by natural biological processes into harmless byproducts like water, carbon dioxide, and biomass. Derived primarily from renewable resources such as plant oils or sugars, these surfactants are used in personal care products, household cleaners, and various industrial applications. Unlike conventional surfactants, they decompose quickly and do not persist in the environment, making them less toxic to aquatic life and safer for long-term ecological health. Their growing use is driven by increasing demand for sustainable, non-polluting alternatives in both consumer and commercial products.

The global Biodegradable Surfactants market size was estimated at USD 2669.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
