Abstracts

Biodegradable trash bags are plastic bags designed for waste collection and disposal that are engineered to break down more rapidly than conventional plastic bags through natural processes, typically involving microbial action, when exposed to specific environmental conditions such as sunlight, moisture, or oxygen. These bags are often made from bioplastics derived from renewable resources like corn starch, polylactic acid (PLA), polyhydroxyalkanoates (PHA), or sometimes petroleum-based materials enhanced with additives to accelerate decomposition, and they must meet certain industry standards or certifications?such as ASTM D6400 or EN 13432?to verify their compostability and reduced environmental impact compared to traditional plastic bags, which can persist in landfills for centuries.

The global Biodegradable Trash Bags market size was estimated at USD 1860.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
