Abstracts

Biodegradable turf staples are specialized fasteners used in landscaping and erosion control applications, manufactured from materials such as cornstarch-based polymers, bamboo, or other compostable substances that break down naturally over time without leaving microplastic residues. These products are designed to secure turf, netting, erosion control blankets, and other ground coverings in place during establishment, offering an eco-friendly alternative to traditional plastic or metal staples by eliminating the need for manual removal after use and reducing long-term environmental impact. Their decomposition timeline typically aligns with the growth period of the vegetation being supported, ensuring functionality during the critical stabilization phase before gradually integrating into the soil.

The global Biodegradable Turf Staples market size was estimated at USD 55.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
