Report Overview

Biodegradable vascular stents are medical devices used to treat narrowed or blocked blood vessels. These stents are designed to gradually dissolve over time, reducing the risk of long-term complications associated with traditional metal stents. The biodegradable nature of these stents is particularly beneficial as it eliminates the need for additional surgical procedures to remove the stent once it has served its purpose. This innovative technology represents a significant advancement in the field of interventional cardiology and offers a promising alternative for patients in need of vascular intervention.
