Report Overview

Bioethanol is an alcohol made by fermentation, mostly from carbohydrates produced in sugar or starch crops such as corn, sugarcane, or sweet sorghum. Cellulosic biomass, derived from non-food sources, such as trees and grasses, is also being developed as a feedstock for ethanol production.

In 2017, the transportation end-use industry segment accounted for the largest share of the bioethanol market. The transportation sector accounts for a major share of approximately 14 to 20% of the world's CO₂ emission. Producing and using bioethanol in fuels can help reduce CO₂ emissions significantly. This acts as the major growth driver for the transportation industry, which, in turn, acts as a key driver for the bioethanol market. However, the fastest growing end-use industry segment for the bioethanol market is the alcoholic beverages segment. The growth of this industry is attributed to the increasing purchasing power and acceptance of drinking alcoholic beverages in developing countries.

The Global Bioethanol Market Size was estimated at USD 61377.44 million in 2021 and is projected to reach USD 79193.19 million by 2028, exhibiting a CAGR of 3.71% during the forecast period.
