Report Overview

Biofoam packaging refers to biodegradable and compostable foam materials derived from natural sources such as plant starch (e.g., corn, sugarcane, or cassava) or mushroom mycelium, designed as an eco-friendly alternative to traditional petroleum-based polystyrene foam (EPS). Unlike conventional foam, biofoam decomposes under industrial composting conditions, significantly reducing environmental impact while maintaining similar protective and insulating properties for packaging applications. The material is increasingly adopted in industries like food service, electronics, and e-commerce due to growing sustainability mandates and consumer demand for greener solutions. However, challenges such as higher production costs, limited scalability, and variable performance under extreme conditions may influence its widespread adoption. The market is driven by regulatory pressures, corporate sustainability goals, and innovations in bio-based material science.

The global Biofoam Packaging market size was estimated at USD 1252.13 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
