Report Overview:

The rapid increase in the global population raises the demand for food and energy for improved life. Therefore, the questions arising under the “Food vs. Fuel” debate are how much arable land is available, what should be the priority, and how should the land be used, among others. There is an increased debate on the increasing prices of food due to the crops utilized for the manufacturing of biofuels. For example, in 2012, Peter Brabeck-Letmathe, Chairman of Nestle, stated, “If no food was used for fuel, the prices would come down again-that is very clear.” In addition, Paul Conway, Chairman of Cargill, stated, “The bigger picture globally is increased urbanization, which leads to more food being consumed...there has also been an explosion in biofuel use and the financializing of the agricultural markets.” The increasing number of such debates has decreased the adoption of biofuels to certain extent and the biofuel producers are conducting studies on the alternate sources of biofuels. Therefore, decreasing biofuel adoption has reduced the demand for biofuel additives across the globe.

The Food vs. Fuel debate has considerably decreased the growth of the biofuel additives market. However, with increasing advancement in second-generation biofuels, the impact of this driver is expected to decrease during the forecast period.

The Global Biofuel Additives Market Size was estimated at USD 3865.71 million in 2023 and is projected to reach USD 6483.19 million by 2029, exhibiting a CAGR of 9.00% during the forecast period.
