Report Overview

Biofuels are renewable energy sources derived from biological materials such as plants, animal fats, and waste biomass. Biodiesel, a major segment of biofuels, is typically produced from vegetable oils, animal fats, or recycled greases through processes like transesterification, resulting in fatty acid methyl esters (FAME) that can replace or blend with conventional diesel. Biofuels serve as sustainable alternatives to fossil fuels, reducing greenhouse gas emissions, decreasing reliance on crude oil, and supporting energy security. The market encompasses both first-generation biofuels derived from food crops like soybean, rapeseed, and palm, and advanced second-generation biofuels produced from non-food biomass, including agricultural residues and waste oils. The growing emphasis on environmental sustainability, carbon reduction policies, and technological advancements in production processes are key drivers of the biofuels and biodiesel market.

The global Biofuels and Biodiesel market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
