Report Overview

This report studies the Biogas market. Biogas is the gaseous product of anaerobic digestion, a biological process in which microorganisms break down biodegradable material in the absence of oxygen.

Biogas is comprised primarily of methane (50%–70%) and carbon dioxide (30%–50%), with trace amounts of other particulates and contaminants. It can be produced from various waste sources, including landfill material; animal manure; wastewater; and industrial, institutional, and commercial organic waste.

Biogas can also be produced from other lignocellulosic biomass (e.g., crop and forest residues, dedicated energy crops) through dry fermentation, co-digestion, or thermochemical conversions (e.g., gasification).

China is the largest market, with a share over 30%, followed by USA and Germany, both have a share about 45 percent.

In terms of product, Livestock Farm is the largest segment, with a share about 55%.

And in terms of application, the largest application is Electricity, followed by Gas Grid, Vehicle Fuel, etc.
