Report Overview

Biohydrogen is a type of green hydrogen derived or produced from biogases and biomass. In contrast to the other forms of hydrogen, biohydrogen can be zero or even carbon negative if it is obtained from feedstocks such as wastes and manure. In addition, depending on the biohydrogen technology, biohydrogen production can generate co-products such as pure biogenic carbon dioxide, digestate or biochar. This process further supports the decarbonisation of industries, contributing to the circular economy and helping to permanently store carbon in the soil.

The global Biohydrogen market size was estimated at USD 186 million in 2023 and is projected to reach USD 1986.13 million by 2032, exhibiting a CAGR of 30.10% during the forecast period.
