Abstracts

Biologic therapeutic drugs, also known as biologics, are complex pharmaceutical products derived from living organisms or manufactured using biological processes, including recombinant DNA technology, cell cultures, and genetic engineering. They differ fundamentally from traditional small-molecule drugs in their large size, structural complexity, and mechanism of action, often targeting specific pathways or molecules in the body with high precision. Key categories include monoclonal antibodies, vaccines, gene and cell therapies, blood products, and cytokines. Due to their intricate nature, biologics require sophisticated manufacturing, stringent regulatory oversight, and specialized storage and handling, often resulting in higher costs but offering transformative treatments for chronic, rare, and life-threatening diseases such as cancer, autoimmune disorders, and metabolic conditions.

The global Biologic Therapeutic Drug market size was estimated at USD 450000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
