Abstracts

Biological Defense Measure is a set of medical or military measures. These are taken in response to the demand for restoring the biosecurity of a country against biological toxins or infectious agents. The agents can be used with the intent to kill or infect humans, animals, or the environment and to instigate biological warfare. Biological agents used during bioterrorism are usually living organisms. These can include bacteria, viruses, fungi, or toxins that are deliberately used to sicken and kill creating social and economic turmoil. Developed economies are sending aid to countries with weak medical infra and low research capabilities many companies like Bavarian Nordic and Ology Bioservices are researching Ebola and Zika virus. The introduction of the Project BioShield Act was a strategic decision to increase funding for procuring, developing, and utilizing medical countermeasures against biological, chemical, radiological, and nuclear (CBRN) warfare agents. These above-mentioned factors and the rising risk of prevalence of the infectious disease is expected to boost the market growth.

The global Biological Defense Measures market size was estimated at USD 16900.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
