Abstracts

Biological indicators (BIs), as defined by ANSI/AAMI and ISO, are test systems containing viable microorganisms providing a defined resistance to a specific sterilization process. A biological indicator provides information on whether necessary conditions were met to kill a specified number of microorganisms for a given sterilization process, providing a level of confidence in the process. Biological Indicators (BIs) play a critical role in sterilization validation and infection control, widely used in medical devices, pharmaceuticals, food processing, and life sciences laboratories. They assess the effectiveness of steam, dry heat, ethylene oxide (EO), hydrogen peroxide, and other sterilization methods, ensuring compliance with ISO 11138, USP, and FDA regulations. Based on form factor, BIs can be categorized into Self-Contained Biological Indicators (SCBIs), BI Strips, and BI Suspensions. Among them, SCBIs are widely used due to their convenience, reduced contamination risk, and enhanced validation efficiency. In terms of application, the medical sector dominates the market, as hospitals and medical device manufacturers must routinely validate sterilization equipment like autoclaves and plasma sterilizers. The pharmaceutical industry also has stringent requirements for sterilization, especially in injectable drugs, vaccines, and sterile drug production. Additionally, the food and beverage sector is increasingly adopting BIs to monitor sterilization efficiency in processing equipment, ensuring food safety and regulatory compliance. Regionally, North America is the largest market, with a share nearly 55%. North America and Europe lead the market due to stringent medical regulations and high industry standards. The Asia-Pacific region (especially China and India) is experiencing rapid growth in the BI market, driven by expanding healthcare and pharmaceutical industries and evolving regulatory frameworks. Latin America and the Middle East are also emerging markets, benefiting from improvements in healthcare infrastructure. Looking ahead, the BI industry is shifting toward more efficient, intelligent, and automated solutions. Rapid-read BIs, electronic BIs (E-BIs), and smart monitoring

systems are gradually replacing traditional methods, reducing manual intervention, accelerating sterilization validation, and improving quality control. As pharmaceutical regulations tighten and medical device standards advance, the demand for BIs is expected to rise, ensuring a more reliable approach to sterilization validation and infection control worldwide.

The global Biological Indicators market size was estimated at USD 411.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
