Report Overview:

The biological sealant has various advantages such as efficiency, safety, and ease in usability and these advantages have made biological sealants a widespread prominence. Also, conventional surgical has more advantages over traditional methods which include sutures and staples. Besides, it is used in a combination of staples and sutures for emergency care in the case of gas or fluid sealing and haemostasis. The biological sealants help reduce the use of the sutures by forming or bounding a chemical barrier to control the ooze, blood, or body fluids after surgery or injury. In addition, they help substantially reduce the risk of transmission of blood-borne illness, tissue reactivity, and infection.
