Report Overview

Biologics and Biosimilars refer to a class of complex pharmaceutical products derived from living organisms or their components. Biologics are medicines made from proteins or other molecules that are produced by or derived from living organisms, such as cells or tissues. They are used to treat a variety of conditions, including autoimmune diseases, cancers, and genetic disorders. Biosimilars, on the other hand, are highly similar versions of already approved biologics, developed to offer more affordable alternatives without compromising safety and efficacy. They undergo rigorous testing to ensure they perform similarly to the original biologic in terms of quality, safety, and efficacy. Both biologics and biosimilars play a significant role in modern medicine, providing innovative treatment options for patients with various health conditions.
