Abstracts

Biologics outsourcing refers to the practice by pharmaceutical and biotechnology companies of contracting specialized third-party organizations, known as contract development and manufacturing organizations (CDMOs) or contract research organizations (CROs), to perform various stages of the development, manufacturing, testing, and commercialization of biologic drugs, which are large, complex molecules derived from living organisms. This outsourcing spans a wide range of activities, including cell line development, process optimization, analytical testing, clinical trial material production, commercial-scale manufacturing, fill-finish operations, and regulatory support. The model allows sponsor companies to leverage external expertise, reduce capital expenditure, accelerate time-to-market, manage capacity constraints, and mitigate risks associated with the highly technical and capital-intensive nature of biologics production, particularly for monoclonal antibodies, recombinant proteins, vaccines, gene therapies, and other advanced modalities.

The global Biologics Outsourcing market size was estimated at USD 71500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
