Abstracts

In pharmaceutical manufacturing, fill-finish operations are critical, since fill-finish is the last step before a product is packaged and ultimately delivered to the patient. By the time a drug reaches this stage, the drug product is highly valuable, as it has already been through labour- and cost-intensive production stages, including upstream processing, cell culture or fermentation and downstream purification. Failures in the integrity of the fill-finish stage can introduce microbial contamination and generate issues with formulation and dosing

The global Biologics Sterile Fill Finish Services market size was estimated at USD 3139.09 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
