Abstracts

Biomass briquette machines are specialized mechanical devices designed to compress organic waste materials?such as agricultural residues (e.g., rice husk, sawdust, straw), forestry byproducts, and other biomass?into compact, high-density briquettes through processes like extrusion, compaction, or pelletization, with or without binders. These machines play a critical role in waste management and renewable energy production by transforming low-bulk-density biomass into uniform, easy-to-handle, and efficient solid fuel briquettes that serve as a sustainable alternative to traditional fossil fuels like coal or firewood in industrial, commercial, and domestic heating applications.

The global Biomass Briquette Machine market size was estimated at USD 15.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
