Abstracts

A biomass electric boiler is a specialized heating system that converts biomass materials?such as wood pellets, chips, or agricultural residues?into thermal energy through combustion, which is then used to generate electricity that powers an electric boiler element. This hybrid approach combines the renewable fuel source of biomass with the efficiency and controllability of electric heating, offering a sustainable alternative to fossil fuel-based systems. It is particularly relevant in regions with abundant biomass resources and supportive energy policies, catering to industrial, commercial, and residential applications seeking to reduce carbon emissions and reliance on non-renewable energy.

The global Biomass Electric Boiler market size was estimated at USD 1780.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
