Abstracts

A Biomass Steam Turbine is a type of steam turbine used to generate electricity or mechanical power by utilizing steam produced from the combustion of biomass materials. Biomass refers to organic materials such as agricultural residues, wood chips, sawdust, straw, or other renewable biological sources. The Biomass Steam Turbine Market is a growing segment of the global renewable energy industry, driven by increasing demand for sustainable energy solutions and government policies encouraging the use of renewable resources. Biomass steam turbines are widely used in biomass power plants and combined heat and power (CHP) systems to generate electricity and thermal energy. These systems leverage renewable organic materials (biomass) to produce steam, which powers the turbines for energy generation. The market is influenced by the global push toward reducing carbon emissions, the rising cost of fossil fuels, and the need for energy diversification. Biomass is recognized as a reliable renewable resource that can provide base-load power, unlike intermittent renewables such as wind and solar.

Key Drivers:

- Sustainability Goals:** Governments worldwide are setting ambitious renewable energy targets to combat climate change, driving the demand for biomass-based energy solutions.
- Energy Independence:** Biomass power plants help reduce reliance on fossil fuels by utilizing locally available biomass resources.
- Waste Management:** Biomass energy systems utilize agricultural and industrial organic waste, addressing waste disposal challenges.
- Carbon Neutrality:** Biomass is considered a carbon-neutral energy source, as the CO₂ emitted during combustion is offset by the CO₂ absorbed by plants during their growth.

Key Challenges:

- High capital costs for biomass power plant installations.
- Supply chain inefficiencies for biomass fuel.
- Competition from other renewable energy sources like solar and wind.

Opportunities:

- Technological advancements in steam turbine efficiency and biomass boiler design.
- Increasing adoption of decentralized energy systems in rural areas.
- Emerging markets in developing economies for small and medium-sized biomass

power plants.

The global Biomass Steam Turbine market size was estimated at USD 1524.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
