Report Overview

Biometric technology uses human physical attributes as locks and keys, making it particularly suitable for access control systems on the buildings of large organisations. Using biometrics for security and identification requires meeting two challenges: they must be cheap enough and sufficiently simple to be used by ordinary users. Furthermore, for enhanced security, these biometric access control systems should combine two or more types of authentication, such as coupling fingerprints with keycodes or passwords to provide greater trust that who is logging in is only who is expected to do so.

The global Biometric Access Control Systems market size was estimated at USD 3850.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.85% during the forecast period.
