## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bionic Dexterous Hand competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The index finger, middle finger, ring finger and pinky finger of the human hand each have 3 degrees of freedom for bending/extension, and each has 1 degree of freedom for abduction/closing at the base of the fingers, for a total of 16 degrees of freedom. The thumb has 5 degrees of freedom, which can be specifically divided into bending/extension degrees of freedom, abduction/closing degrees of freedom and rotation degrees of freedom, for a total of 21 degrees of freedom. This multi-degree-of-freedom feature enables the human hand to flexibly complete various grasping tasks and delicate and complex operations. Under normal circumstances, a dexterous hand only needs 3 fingers with 3 degrees of freedom to complete most tasks. Therefore, we define a bionic dexterous hand as an end effector with an index ? 3 and degrees of freedom ? 9.

The global Bionic Dexterous Hand market size was estimated at USD 1582.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
