Abstracts

Biophysical characterization services refer to a suite of analytical methods used to assess the physical and structural properties of biomolecules, such as proteins, nucleic acids, antibodies, and other biotherapeutics. These services help determine key parameters such as molecular weight, size, shape, aggregation, thermal stability, conformational changes, and interactions with other molecules. Common techniques include dynamic light scattering (DLS), differential scanning calorimetry (DSC), isothermal titration calorimetry (ITC), circular dichroism (CD), and surface plasmon resonance (SPR). Biophysical characterization is crucial in drug discovery, biosimilar development, formulation optimization, and quality control to ensure the safety, efficacy, and stability of biologics.

The global Biophysical Characterization Service market size was estimated at USD 895.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
