Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Biopreservation competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Biopreservation is a technique used for the storage of cells and tissues in a hypothermic or chemical environment to preserve biological samples with sustained integrity. Biopreservation of cells, tissues, and organs is a frequently applied and required practice used to extend the stability and viability in both short-term and long-term storage of samples for research and clinical applications. This report will only include Biopreservation media, Biopreservation equipment is not covered in this report. The biopreservation market is primarily driven by the rapid expansion of life sciences research and the growing demand in the healthcare industry. The increasing adoption of regenerative medicine, cell therapy, immunotherapy, and personalized medicine has created a strong need for long-term storage solutions to maintain the viability and functionality of cells, tissues, and biological samples. The rise of stem cell and gene therapy has further boosted demand for cryopreservation equipment, cryoprotective agents, and advanced cold storage systems among research institutions and biopharmaceutical companies. Additionally, the global development of biobanks and the standardization of sample management in clinical research are fueling market growth. The expanding vaccine and biopharmaceutical sectors, especially with the production and distribution of novel vaccines and antibody-based drugs, also rely heavily on effective preservation technologies. Furthermore, an aging population, the rising prevalence of chronic diseases, and the increasing need for efficient supply chain and distribution systems are reinforcing market demand. Overall, technological innovations in biomedical science, the growing clinical and research requirements, and the modernization of global healthcare infrastructure are the key factors driving the

biopreservation market. Global biopreservation main players include Gasrec, Future Biogas, VERBIO, Thorso Biogas, Staples, Vegetables, Nature Energy, Asia Biogas, Deqingyuan, Mengniu, Shandong Minhe, J V Energen, AltEnergo, etc., totally accounting for about 85%. North America is the largest market, with a share over 80%. As for the types of products, it can be divided into home-brew media and pre-formulated media. Home-brew media is the largest segment, holding a share over 73%. In terms of applications, it is widely used in drug discovery, regenerative medicine, biobanking and others. The most application is regenerative medicine, with a share over 50%.

The global Biopreservation market size was estimated at USD 1090.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
