## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Biopreservation Media competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Biopreservation Media are specialized culture media and cryopreservation solutions used to preserve cells, tissues, and organs for long-term storage, transport, and transplantation. In 2024, the global average price of biopreservation media is approximately US\$175 per liter, with worldwide shipments reaching about 3.2 million liters. Gross margins typically range from 30%?50%, driven by the complexity of formulation, regulatory requirements, raw material quality, and advancements in cryopreservation techniques. The supply chain includes upstream media components (such as amino acids, vitamins, and cryoprotectants), raw materials, high-quality plastics for containers, and packaging materials; midstream manufacturers formulate media, conduct quality control and validation, and provide packaging; downstream customers include cell therapy companies, vaccine developers, biopharmaceutical manufacturers, academic research institutions, and hospitals. The biopreservation media market is experiencing strong growth, driven by increasing demand for cell-based therapies, regenerative medicine, and vaccine development. With the rise of personalized medicine and cell therapy applications, the need for high-quality preservation solutions to ensure cell viability during storage and transport has surged. Advances in cryopreservation technology and improved media formulations continue to drive innovation in the market, leading to sustained growth through 2031.

The global Biopreservation Media market size was estimated at USD 560.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
