Abstracts

Bioprinted Tissue Therapeutics uses bioprinting technology to print biomaterials (such as cells, bio-inks, etc.) layer by layer according to the design pattern to form living tissues or organs with specific structures and functions for disease treatment, tissue repair or medical research. This technology is based on the idea of additive manufacturing. By precisely controlling the three-dimensional spatial distribution of cells and biomaterials, it constructs a bionic structure that is highly similar to human tissue, providing personalized and customized solutions for regenerative medicine. Its core lies in simulating the natural structure and function of human tissue, realizing the precise integration of cells, biomaterials and biochemical factors, and breaking through the limitations of scaffold manufacturing in traditional tissue engineering.

The global Bioprinted Tissue Therapeutics market size was estimated at USD 524.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
