Report Overview:

Ocular implants — small devices designed to be inserted into the eye and deliver a drug locally over an extended period — are rapidly gaining ground as a treatment option. As patients continue to seek out convenient, less invasive treatments, the demand for these implants will continue to increase. Bioresorbable implants are inserted into the patient's eye and safely absorbed by the body over time. These implants combine a drug with a polymer — often polylactic-co-glycolic acid (PLGA) — which degrades over time, releasing a drug.

The Global Bioresorbable Ocular Implant Market Size was estimated at USD 325.68 million in 2023 and is projected to reach USD 477.90 million by 2029, exhibiting a CAGR of 6.60% during the forecast period.
