Report Overview

Bioresorbable polymer-based implants are being widely used for fracture fixation in orthopedic surgery. Orthopedic implants, such as interference screws, plates, pins, suture anchors, meniscal repair implants, and simple fracture fixation implants, are the most commonly used resorbable implants for anterior cruciate ligament reconstruction, shoulder surgery, meniscal repair, and fracture care. When these implants are added to the body, they perform the desired action, and once done, these implants get absorbed in the body by themselves. These resorbable polymer-based implants include sutures, screws, stents, plates, pins, and others used in various orthopedics sub-applications, such as trauma, hip, knee, spine, joint, and other injuries. These implants break down naturally after implantation, during the healing and supporting process.

The global Bioresorbable Polymer Based Implants market size was estimated at USD 1748.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.85% during the forecast period.
