Abstracts

Bevacizumab is a humanized monoclonal antibody. It inhibits angiogenesis (the formation of new blood vessels) by blocking the action of vascular endothelial growth factor A (VEGF-A). Bevacizumab can therefore slow the growth of new blood vessels in tumours and is used to treat various cancers. Like generics, biosimilars have similar safety and effectiveness as their original (reference) medication. But they usually cost less. Market CAGR for biosimilar bevacizumab is being driven by the advancing product innovation. Advancing product innovation in the biosimilar bevacizumab market entails leveraging cutting-edge technologies and research methodologies to develop high-quality alternatives to the original drug. This involves refining manufacturing processes, enhancing therapeutic efficacy, and ensuring regulatory compliance. By driving innovation, companies can expand market access, improve patient outcomes, and foster competition, ultimately leading to increased affordability and accessibility of this critical biologic therapy.

The global Biosimilar Bevacizuma market size was estimated at USD 1604.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
