Abstracts

Monoclonal antibodies (mAb) are antibodies produced by using identical immune cells that are clones of one unique parent cell. Since monoclonal antibodies are produced from clones of only one parent cell, all monoclonal antibodies produced by the parent cell are the same due to which, they are called biosimilar monoclonal antibodies. Biosimilar Monoclonal Antibodies refer to the biologic medical product that are almost an identical copy of the original monoclonal antibodies but manufactured by a different company. The biosimilar monoclonal antibodies market is primarily driven by the increasing demand for cost-effective biologic treatments. As patents for many original biologic drugs expire, biosimilars offer a more affordable alternative without compromising efficacy. This is particularly important in treating chronic diseases like cancer and autoimmune disorders, where long-term treatment costs can be prohibitive. The growing acceptance of biosimilars by healthcare providers and regulatory approvals in various regions further propels market growth. However, a key challenge facing the market is the complexity of manufacturing biosimilar monoclonal antibodies. Due to their structural intricacies, even minor variations in production processes can lead to differences in efficacy or safety compared to the original biologic. Additionally, patient and physician skepticism, driven by concerns over efficacy and potential side effects, can hinder widespread adoption, especially in markets where the original biologics are well-established. Global Biosimilar Monoclonal Antibodies key players include Celltrion, 3SBIO, Pfizer (Hospira), Novartis, etc. Global top four manufacturers hold a share nearly 85%. Europe is the largest market, with a share about 40%, followed by China, and United States, both have a share about 50 percent. In terms of product, Infliximab is the largest segment, with a share nearly 40%. And in terms of application, the largest application is Autoimmune Disease, followed by Oncology, etc.

The global Biosimilar Monoclonal Antibodies market size was estimated at USD 6087.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.00% during the forecast period.
