Report Overview

Anthrax is a serious disease that can affect both animals and humans. It is caused by bacteria called *Bacillus anthracis*. People can get anthrax from contact with infected animals, wool, meat, or hides. Anthrax vaccine protects against anthrax disease. Anthrax vaccine was licensed in 1970. Based on limited but sound evidence, the vaccine protects against both cutaneous (skin) and inhalation anthrax. Biothrax, commonly known as the anthrax vaccine, is a medical countermeasure developed to protect individuals from anthrax, a potentially lethal bacterial infection caused by *Bacillus anthracis*. The vaccine is used primarily for military personnel, laboratory workers, and individuals at high risk of exposure to anthrax spores. It stimulates the immune system to produce antibodies against the anthrax toxin, preventing the progression of the disease if exposed to the bacteria. Biothrax is administered through a series of doses and boosters and is a critical component of preparedness against bioterrorism threats involving anthrax.

The global Biothrax (Anthrax Vaccine) market size was estimated at USD 655 million in 2023 and is projected to reach USD 1276.98 million by 2032, exhibiting a CAGR of 7.70% during the forecast period.
