Abstracts

A bipolar pulse generator is an electronic instrument designed to produce precisely controlled electrical pulses with both positive and negative voltage phases, typically characterized by fast rise and fall times, adjustable amplitude, pulse width, and repetition rate. It differs from unipolar pulse generators by its ability to output symmetrical or asymmetrical voltage swings around a reference point (often ground), making it essential for applications requiring bidirectional signal stimulation, such as testing semiconductor devices, driving piezoelectric actuators, evaluating magnetic materials, biomedical research involving neural stimulation, and calibrating high-speed data acquisition systems where signal integrity and minimal DC offset are critical.

The global Bipolar Pulse Generator market size was estimated at USD 52.1 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
