Report Overview

Birch water is the drink also known as birch sap which is collected from birch trees. Birch water is produced in the northern hemisphere during the period when winter comes to an end. The production of birch water is seasonal and doesn't take place during the whole year. The source of birch water, birch trees stores vital nutrients and minerals in its roots. During the winter season, various nutrients get accumulated in birch trees and as winter season ends and spring season begins these nutrients get released in their sap. Birch water serves as an ideal drink which offers multiple benefits to the consumers.

Birch water offers a sweet and mesmerizing taste, due to the presence of xylitol, a low-calorie sugar which is also used in candies and chewing gums. Presence of this type of sugar makes birch water a low-calorie drink as compared to other beverages. Drinking birch water prevents dental cavities, is beneficial for skin as it makes skin softer and protects the skin from harmful UV rays and inflammation, and helps in removal of acids and toxins from the body. Birch water also lowers the cholesterol due to the presence of an element called saponin which absorbs cholesterol. Cleansing of the kidney by eliminating urea, ammonia, and other compounds, is also a prominent functionality of birch water. The product acts as a natural detoxing and hydrating agent and possesses minerals such as calcium, manganese, zinc, and others.
