### Report Overview

As birds are extremely common in cities, bird control through haze generators is becoming increasingly popular. These haze generators create a no-fly zone by creating a mist, haze, or spraying non-toxic chemicals such as methyl anthranilate into the air. The chemical acts as an irritant to the bird and agitates their trigeminal nerve causing temporary discomfort to the birds thereby repelling them from the area. These chemicals are considered to be safe by the U.S. Food and Drug Administration and cause no long-term harm to the birds.
