Report Overview

Bird training refers to the practice of teaching birds, typically pet birds like parrots, canaries, or pigeons, to perform specific behaviors, follow commands, or interact positively with humans. This includes basic obedience training, trick training, speech mimicry, and even specialized tasks such as falconry or homing pigeon navigation. The process relies on positive reinforcement techniques, operant conditioning, and consistent repetition to modify avian behavior. Bird training serves various purposes, from enhancing pet-owner bonding and mental stimulation for captive birds to practical applications in conservation, entertainment, and competitive sports like pigeon racing. The market for bird training encompasses products (training tools, treats, instructional materials), professional services (trainers, behavioral consultants), and digital resources (apps, online courses), catering to both hobbyists and commercial aviculturists. Demand is driven by pet ownership trends, avian welfare awareness, and niche interests in bird-related activities.

The global Bird Training market size was estimated at USD 175.44 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
