### Report Overview

Bis(cyclopentadienyl)Manganese is an organic manganese compound with formula  $[Mn(C_5H_5)_2]_n$ . It is a thermochromic solid, which will degrade rapidly in air. Compared with the metallocene of other transition metals in the same row, the ionic properties of manganese metallocene make it have an unusual reaction mode. According to kinetic instability, it is easy to be hydrolyzed through water or hydrochloric acid, and it is easy to form adducts with two-stroke or four electron Lewis bases. It can be used as catalyst or pharmaceutical intermediate material.
