Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bismuth Ferrite Powders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Bismuth Ferrite Powders (chemical formula: BiFeO_3) are multiferroic ceramic materials that exhibit both ferroelectric and antiferromagnetic properties at room temperature. These powders are typically synthesized using methods such as sol-gel, hydrothermal, or solid-state reactions to produce fine crystalline particles with perovskite structures. Bismuth ferrite is of significant interest in advanced material science due to its unique combination of electric and magnetic orderings, making it suitable for applications in spintronics, magnetoelectric sensors, memory devices, and photocatalysis. The powders are usually characterized by parameters such as particle size, purity, phase composition, and magnetic/electric behavior. Bismuth Ferrite (BiFeO_3) Powders are characterized by a perovskite crystal structure with rhombohedral distortion and exhibit both ferroelectricity and antiferromagnetism at room temperature. These powders typically possess high chemical purity (>99.9%) and particle sizes ranging from 20 nm to 5 μm , depending on the synthesis method. They have a bandgap of approximately 2.1-2.7 eV, making them suitable for photocatalytic and optoelectronic applications. The material exhibits weak ferromagnetism due to spin canting, with a Néel temperature around 370°C and a ferroelectric Curie temperature near 830°C. Surface area values typically range between 5-50 m^2/g , and the powders demonstrate high electrical resistivity ($\sim 10^{10}$ $\Omega\text{-cm}$) and moderate dielectric constants (100-300), contributing to their multifunctional behavior in memory devices, spintronics, and sensors.

The global Bismuth Ferrite Powders market size was estimated at USD 539.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
