Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bisphenol A-glycidyl Methacrylate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Bisphenol A-glycidyl Methacrylate reached approximately 224 kilotons, with an average global market price of around USD 1400 per ton. Bisphenol A-glycidyl Methacrylate (Bis-GMA) is a viscous, high-molecular-weight aromatic dimethacrylate monomer synthesized by reacting bisphenol A diglycidyl ether with methacrylic acid, resulting in a compound that combines rigid bisphenol A structural units with reactive methacrylate groups. It is widely used in dental restorative materials, dental adhesives, and composite resins due to its excellent mechanical strength, dimensional stability, and adhesion to tooth structures. The bulky bisphenol A core imparts rigidity, while the methacrylate groups enable free-radical polymerization with other methacrylate monomers, forming durable cross-linked networks. Its high viscosity often requires blending with lower-viscosity comonomers (e.g., TEGDMA) to improve handling and curing properties. The key market drivers for Bisphenol A-glycidyl Methacrylate (Bis-GMA) are primarily fueled by the growing demand in the global dental materials industry, where it is a critical component in dental composites, sealants, and adhesives due to its high mechanical strength, low polymerization shrinkage, and strong adhesion to enamel and dentin. Rising incidences of dental disorders, increased awareness of oral health, and expanding access to dental care in emerging economies are boosting consumption. Additionally, advancements in restorative dentistry and aesthetic dental procedures are spurring demand for high-performance resin systems incorporating Bis-GMA. Regulatory emphasis on biocompatibility and performance standards in dental materials also supports market growth, while ongoing research into improved formulations with reduced monomer leaching further strengthens its adoption.

in modern dental applications.

The global Bisphenol A-glycidyl Methacrylate market size was estimated at USD 314.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
