### Report Overview

Bit error rate (BER) is the number of bit errors per unit time or bit error ratio is defined as the ratio of total number of bits transferred over a communication medium to the total number of bit errors at the recipient side. Bit Error Rate (BER) testers are the systems used to detect the BER over any communication link as radio link, optical fiber, copper cable or others. When the data is transmitted from one place to another over a communication medium, there is a chances of error get introduced within the information data, especially because of the noisy environment of the medium over which information is transmitted. In short it is used to test the quality of link or the medium of communication, if there is less bit error rate which indicates good quality of system.

The key trend of Bit Error Rate (BER) tester market is the demand of Bit Error Rate (BER) tester because of compliance testing and validation of 40GbE and 100GbE networks will increase. The key growth drivers of Bit Error Rate (BER) tester market are increased demand of modular BERTs, increased growth of digital interfaces in global market, new and advanced emerging standards like 40 gig and 100gig are also the factors supporting the growth of global Bit Error Rate (BER) tester market. On the other hand lower education level in emerging regions, lower awareness of end user about Bit Error Rate (BER) tester's applications and also the competition for standalone BERTs are the key restraints for Bit Error Rate (BER) tester market.
