Report Overview

Bit error rate (BER) is the number of bit errors per unit time or bit error ratio is defined as the ratio of total number of bits transferred over a communication medium to the total number of bit errors at the recipient side. Bit Error Rate (BER) testers are the systems used to detect the BER over any communication link as radio link, optical fiber, copper cable or others. When the data is transmitted from one place to another over a communication medium, there is a chances of error get introduced within the information data, especially because of the noisy environment of the medium over which information is transmitted. In short it is used to test the quality of link or the medium of communication, if there is less bit error rate which indicates good quality of system.
