Report Overview

Bit error rate testers are usually designed for testing radio telemetry systems, synchronous serial communication equipment, and communication links. The high rate of penetration of broadband communication and sharp rise in demand of the access lines are driving the need of communication links with high transmission capacity and very low bit error rate. When some data is transmitted over a particular communication channel, there is a probability of errors being arrived into the system. BER tester identifies the error frequency and bit error rate (BER) over a communication channel for evaluating its overall performance, thereby improving the communication link quality and enabling network system to incorporate complete link characteristics.
