Abstracts

Bitcoin Ordinals marketplaces typically use Partially Signed Bitcoin Transactions (PSBTs) to facilitate the trustless buying and selling of Bitcoin Ordinals. In an Ordinals marketplace, PSBTs are used when a seller wants to collaborate in signing the same transaction with a buyer. First, the seller will make a PSBT file with the Ordinals price and initiate a transaction by partially signing it. The seller then sends the file that is partially signed to the buyer for signing. Once the buyer signs the transaction, they broadcast it to the network. PSBTs facilitate the portability of unsigned Bitcoin transactions, enabling the seller to initiate the transaction and the buyer to complete it, thus enabling trustless Ordinals trading via a secure marketplace.

The global Bitcoin Ordinals Marketplace market size was estimated at USD 51.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
