### Report Overview

Bituminous paints, also known as asphalt coatings, are one of the major segments in water proof coating materials. Bituminous paints contain coal tar and drying oils and are usually black in color as a result of high proportion of bitumen in it. Bituminous paints are manufactured from elongated hydrocarbon molecules which makes the flow rate difficult. Hence, bitumen is very viscous and generally solid under ambient conditions. Viscous bitumen is then heated at a very high temperature to produce a liquid slurry through vacuum distillation. The above mentioned process produces bituminous paints of various grades. According to its diverse grading, polymerization and formulations, bituminous paints help build a protective and vapor proof coating.

North America emerged as a leading regional market with majority of bituminous paints demand driven by U.S. Growing aviation and marine industries is expected to drive North America bituminous paints market growth over the forecast period. Asia Pacific is expected to register significant growth over the forecast period on account of high growth in construction industry particularly in emerging markets of China and India. Rapid industrialization in the region coupled with significant growth in aviation industry is expected to further complement the regional market growth. Europe bituminous paints market is expected to witness an average growth over the upcoming years on account of increasing regulatory intervention regarding their environmental hazard.
